

# VACUUM SENSOR - DOUBLE PORT

## # SMART-VAC-2

The vacuum sensor – double port from H2O-Smartrek™ records the vacuum level and allows you to identify where leaks are. The sensor is highly precise at 0.05 in. Hg.

Installed between 2 main lines, 2 different vacuum measures will be recorded. The sensor also records the temperature.

The sensor receives and transmits information to all the other sensors in range using radio waves.

Powered by batteries (3x "D").  
3-year life expectancy if used during 3 months per year.
